A versatile, multilayer modular switching platform for mid-range Enterprise applications, delivering highly secure, resilient access to business resources.

OVERVIEW

The 3Com® Switch 7750 Family of modular LAN switches provides intelligent, multilayer switching and routing for enterprises and mid-market businesses, enabling end-to-end network connectivity with advanced traffic management. Providing unparalleled investment protection with high scalability and performance, advanced security and granular network control, the Switch 7750 Family delivers wire-speed Fast Ethernet and Gigabit Ethernet connectivity with 10-Gigabit Ethernet uplinks in a highly flexible and resilient modular platform.

The Switch 7750 Family is perfectly suited to networking environments requiring non-stop access to critical business applications. Three chassis models are available, providing a range of port densities and media flexibility:

- 3Com Switch 7758—8-slot chassis with two slots for switch fabrics (primary and redundant) and six slots supporting any combination of switching I/O modules, up to 292 10/100/1000 or 288 10/100 ports
- 3Com Switch 7757—7-slot chassis with one slot for the switch fabric and six slots supporting any combination of switching I/O modules, up to 292 10/100/1000 or 288 10/100 ports
- 3Com Switch 7754—4-slot chassis with one slot for the switch fabric and three slots supporting any combination of switching I/O modules, up to 148 10/100/1000 or 144 10/100 ports.

All chassis models share the same high-performance, scalable modular architecture—scaling up to 240 Gigabits per second (Gbps) system bandwidth and 179 Million packets per second (Mpps) forwarding performance—for maximum long term investment protection.
**KEY BENEFITS**

**INTELLIGENT ENTERPRISE INFRASTRUCTURE**

Enterprise network infrastructure is evolving dramatically, from the core to the edge of the network, and the 3Com Switch 7750 is designed to meet the greater demands being placed on the entire network system to deliver:

› Highly intelligent, non-stop transport of data and access to information resources

› Guaranteed quality of service (QoS) for mission critical business applications, including Voice over IP (VoIP), storage and video

› Comprehensive security for network access control, encryption and protection of corporate resources

› Unprecedented levels of management visibility and granular control

› An open, standards-based architecture to enable seamless growth and future investment without proprietary lock-ins

**RESILIENT ARCHITECTURE FOR BUSINESS CONTINUITY**

Featuring a resilient and flexible modular architecture, the Switch 7750 Family enhances business continuity by ensuring availability of network resources and critical business applications—including data, voice and video. All critical system components including power supplies, cooling fans and switch fabrics are redundant* and hot-swappable, minimizing the business impact in the unlikely event a component should fail.

Changes in network topology due to device or link failures can lead to disruption of service for critical business applications. Rapid recovery from such topology changes is ensured with features such as Multiple Spanning Tree Protocol (MSTP), Rapid Spanning Tree Protocol (RSTP), Open Shortest Path First (OSPF) routing and Virtual Router Redundancy Protocol (VRRP).

**APPLICATION CONVERGENCE: QOS AND POWER OVER ETHERNET**

Real-time applications such as VoIP demand high QoS and differentiated service levels to function properly. Based on the same proven operating system as the flagship 3Com Switch 8800 Family, the 3Com Switch 7750 delivers robust QoS and advanced traffic management features to ensure critical applications are prioritized and serviced as the needs of the organization dictate.

Additionally, the Switch 7750 supports industry-standard IEEE 802.3af Power over Ethernet (PoE) to provide both electrical power and network connectivity to PoE-capable devices, such as IP telephones and wireless access points, making the Switch 7750 ideal for large-scale enterprise edge deployment.

PoE simplifies network deployment by eliminating the need for separate data and power infrastructures, significantly reducing installation and maintenance costs. PoE also provides greater flexibility for moves, adds and changes on the network. Powered network devices can be deployed or relocated anywhere an Ethernet connection is available without requiring a dedicated power outlet.

* Redundant fabric available on Switch 7758 only.
Security is paramount in today’s enterprise and as dependency on information technology continues to rise, so does the need for highly secure IT systems and infrastructures. The 3Com Switch 7750 features advanced security capabilities, including user and device authentication, policy-based access controls, encrypted system management access and quarantine enforcement for containment of vulnerabilities and deliberate attacks.

The Switch 7750 ensures secure network access using standard IEEE 802.1X network login with RADIUS Authenticated Device Access (RADA). RADIUS support enables user authentication, while the switch is also able to authenticate attached devices (printers, for example) via their MAC address for an additional level of endpoint security. Port- and VLAN-based Access Control Lists (ACLs) and dynamic traffic filtering capabilities can be deployed to further control access to network resources.

Additional security measures—Secure Shell version 2 (SSH v2) and SNMP v3 with authentication and encryption of network management traffic—are enforced when accessing switch management utilities.

The Switch 7750 Family functions as an integral part of the 3Com Quarantine Protection solution to automate containment of security threats on the enterprise network. Quarantine Protection integrates the industry-leading TippingPoint™ Intrusion Prevention System with switch-based endpoint enforcement at the network edge.

**SCALABLE PERFORMANCE**

With up to 240 Gbps of system bandwidth and wirespeed switching capacity, the Switch 7750 provides exceptional scalability for Enterprise distribution and edge environments and for core networks of mid-market businesses. Connectivity and media options can be tailored to each environment with a wide selection of switching modules, scaling up to 292 Gigabit ports or 288 Fast Ethernet ports in a single chassis. 10-Gigabit Ethernet uplink modules allow ultra-high-bandwidth links for inter-switch backbone connections. The flexible design of the Switch 7750 allows for any combination of switching modules to be used in a single system, allowing easy expansion of network capacity with a wide selection of standard interface types for twisted pair (copper) and fiber media.

A 96 Gbps switching fabric provides high-performance switching, routing and centralized management in the Switch 7750. In addition, individual switching I/O modules provide on-board local switching, maximizing system performance and application response times, for an aggregate Layer 2/3 switching capacity of up to 179 Mpps.

Hardware-based routing of multicast traffic enhances performance and reduces latency (delay) for multicast applications, enhancing performance for real-time applications like streaming audio and video.

Standards-based link aggregation (via IEEE 802.3ad) allows scalable, high-bandwidth interconnectivity between network devices, with the ability to aggregate multiple Gigabit links together as a single trunk. Link aggregation of Gigabit ports is supported across fabric modules within the Switch 7758 chassis (when configured with redundant fabrics) for enhanced network availability.
KEY BENEFITS
(CONTINUED)

PRIORITIZATION AND TRAFFIC MANAGEMENT
Eight priority queues per port enable standard IEEE 802.1p Class of Service/Quality of Service (CoS/QoS). Protocol filtering and bandwidth rate limiting capabilities allow the Switch 7750 to enforce port-based controls for efficient use of network resources and prioritization of business-critical or time-sensitive applications, including Voice over IP.

For example, protocols associated with key business applications can receive prioritized, high-bandwidth service; while other protocols that may be associated with non-critical (or even undesirable) applications can receive lower priority and/or bandwidth resources, or be blocked completely.

STANDARDS BASED INTEROPERABILITY AND INVESTMENT PROTECTION
Enterprises today rely on open standards-based technology solutions to enable interoperability among new and existing systems and to ensure that today’s investments will continue to provide value well into the future without being locked-in to a particular vendor’s products or technology.

3Com has designed the Switch 7750 with an open architecture, facilitating seamless growth and migration based on widely accepted international standards, free from costly lock-ins and the restrictions of proprietary approaches.

3Com’s standards-based design philosophy—inherent in the Switch 7750 and all other 3Com products—provides investment protection as well as the flexibility to deploy best-in-class technology solutions which leverage industry standards.

ENTERPRISE CLASS MANAGEMENT AND CONTROL
The Switch 7750 provides independent paths for data and management. A dedicated data channel provides high-speed data switching and packet forwarding, while a separate management channel provides control, monitoring, route learning and distribution.

Comprehensive management capabilities provide enterprise-wide visibility and control to IT staff for configuration, network monitoring and advanced troubleshooting.

Management features are accessible via an intuitive command line interface (CLI), as well as by SNMP, with hierarchical access controls and password protection for secure management access. Additional management security is provided through user authentication and data encryption capabilities of SNMP v3 and SSH v2, further helping prevent unauthorized access or snooping of management traffic.
Highly flexible, resilient architecture for end-to-end enterprise deployment in the core, data center, distribution layer and network edge.

High-density multilayer switching for Fast Ethernet, Gigabit Ethernet and 10-Gigabit Ethernet.

Up to 288 Fast Ethernet or 292 Gigabit Ethernet ports per system.

10-Gigabit uplinks for ultra-high-speed backbone connectivity.

Up to 240 Gbps system bandwidth; up to 179 Mpps switching capacity.

Advanced traffic prioritization and routing of multicast traffic in hardware for convergent applications including VoIP, streaming audio and video.

Virtually non-stop operation with redundant power supplies, fans and switch fabrics*, as well as hot-swappable switching I/O modules.

Robust network access control and enterprise-wide security via standards-based IEEE 802.1X, RADIUS Authenticated Device Access (RADA), and advanced Access Control Lists; authentication and encryption of management traffic via SSH v2 and SNMP v3.

Industry-standard PoE to power IP phones, wireless access points and other devices; reduces implementation and maintenance costs.

Unified management and administration with a common operating system and centralized control available via 3Com Enterprise Management Suite.

Granular QoS and traffic management for enhanced availability and performance of critical business applications.

Extensive L2/3/4 switching and routing capability, including advanced features like IS-IS† and BGP-4‡, applicable in very large enterprises. IPX routing for enhanced support of legacy environments.

* Redundant fabric available on Switch 7758 only.
† Available in the 3Com Advanced Feature Software, at additional cost.
‡ Power over Ethernet (PoE) using 48-port 10/100/1000 Ethernet module; requires optional PoE components to be installed.

SERVICE AND SUPPORT

3Com Global Services offers the resources and talents of a major corporation plus more than two decades of experience in resolving network challenges and delivering business benefits to enterprises around the world.

Global support with a personalized, local focus in the local language helps drive productivity and minimize expenses. Because 3Com understands both the technology and the business, we're the partner you need to remain strong and competitive.

SPECIFICATIONS

All information in this section is relevant to all current members of the 3Com Switch 7750 Family, unless stated otherwise.

CAPACITIES AND PERFORMANCE

3Com Switch 7758 8-slot:
- 2 switch fabric and 6 payload slots
- Backplane: 96 Gbps
- Max. system bandwidth: 240 Gbps (full duplex)
- Max. aggregate system throughput: 179 Mpps

3Com Switch 7757 7-slot:
- 1 switch fabric and 6 payload slots
- Backplane: 96 Gbps
- Max. system bandwidth: 240 Gbps (full duplex)
- Max. aggregate system throughput: 179 Mpps

3Com Switch 7754 4-slot:
- 1 switch fabric and 3 payload slots
- Backplane: 48 Gbps
- Max. system bandwidth: 120 Gbps (full duplex)
- Max. aggregate system throughput: 89 Mpps

All models:
- Layer 3: 1,024 IP interfaces, IP routing at 48 Mpps, 64k IP routing entries

LAYER 2 SWITCHING

16K MAC addresses
- 5K static MAC addresses
- Modules forwarding (delay <10μs)
- 9K jumbo frame support
- 4,096 VLANs (IEEE 802.1Q)

Port-based (IEEE 802.1Q) and protocol-based (IEEE 802.1v) VLANs
- GARP VLAN Registration Protocol (GVRP)
- IGMP v1 and v2
- GARP Multicast Registration Protocol (GMRP)
- Protocol Independent Multicast-Dense Mode (PIM-DM)
- Protocol Independent Multicast-Sparse Mode (PIM-SM)

Multicast VLAN
- Dynamic Host Configuration Protocol relay (DHCP relay)
- DHCP client and server
- TCP/IP protocol stack; ARPs
- Virtual Router Redundancy Protocol (VRRP)

CONVERGENCE

8 hardware queues per port
- Flow-based QoS profiles
- Ingress and egress

Remark of packets based on priority:
- Auto identification and classification of IP telephones
- Selectable prioritization
- Diffserv Code Point (DSCP)
- Type of Service (ToS)
- IEEE 802.1p Class of Service (CoS)
- IP precedence
- Local precedence: physical port, source/destination MAC address, VLAN information, Ethernet type, Layer 3 protocol, source/destination IP address, DSCP
- IP Layer 4 protocol
- IP Layer 4 ports

Anti DoS (Denial of Service) attack
- IP Layer 4 headers
- Application layer
- Protocols

SECURITY

IEEE 802.3af Power over Ethernet standards-compliant
- Available 10/100 and 10/100/1000
- 48-port PoE switch module
- PoE modules require external PoE
- Power Rack:
  - One 2,500W PSU standard
  - Each 2,500W PSU supports up to 155 PoE ports at full standard
  - Power Rack
  - Add one or two additional PSUs for fully redundant

Local authentication and
- RADIUS/AAA authentication
- RADIUS/TACACS+ session accounting
- RADIUS/AAA authentication

DHCP snooping
- Wirespeed packet filtering in hardware
- Supports a maximum of 1,536 ACL rules
- ACLs filter at Layers 2, 3 and 4:
  - Physical port
  - Source/destination MAC address
  - VLAN information
  - Ethernet type
  - Layer 3 protocol
  - Source/destination IP address
  - DSCP
  - Datagram type
  - IP Layer 4 protocol
  - IP Layer 4 ports

Spanning Tree root bridge protection
- SYN packet attack protection
- Telnet protection
- Switch protocol security: MDS cipher-text authentication and clear-text authentication for OSPF, V2 and RIPv2
- And SNMP v3 traffic
- IEEE 802.1X user authentication of
- Switch management on switch Telnet sessions
- Hierarchical management and password protection for management interface
- SNMP v3 encryption
- SSH v2 management session encryption
MANAGEMENT
Command Line Interface (CLI) configuration mode
Configuration via the control console port
Local/remote configuration via Telnet
Remote configuration via modem dial-up
System configuration with SNMP v1, 2 and 3
Secure Shell Version 2 (SSH v2) for management access
Comprehensive statistics, including ACL/QoS and IP interface
Remote Monitoring (RMON) groups statistics, history, alarm and events
System log
Syslog
Detailed alarm and debug information
Front panel indicators for port and unit status information
Hierarchical alarms; alarm generation and filtering
Supports ping and traceroute
Configuration file for backup and restore, stored in non-volatile memory; multiple configuration files available
Supports multiple software images and bank swap, stored in non-volatile memory
Backup and restore of software images
Network Time Protocol (NTP)
Device Link Detection Protocol (DLDP)
IGMP proxy
DHCP server
DNS client
Port mirroring
Flow-based bandwidth management, with flows identified through Access Control Lists (ACLs)
Minimum and maximum thresholds: 64Kbit/s increments, 128 traffic classes per port, 312 flows per class
Random Early Detect/Discard (RED) queue handling
Queuing algorithms
Strict priority queuing
WRR (Weighted Round Robin) provided through bandwidth management
DHCP Relay and UDP Helper
System file transfer mechanisms:
Xmodem, File Transfer Protocol (FTP), Trivial File Transfer Protocol (TFTP), Secure File Transfer Protocol (SFTP), Secure Trivial File Transfer Protocol (STTFTP)
Connectivity: 10BASE-T (RJ-45)
Ethernet, RS-232 control port
Port loopback detection
Cable diagnostic test

3Com Management Applications:
• 3Com Enterprise Management Suite for flexible, extensible management in advanced enterprise IT environments
• 3Com Network Director for comprehensive, turn-key network management for the enterprise
• 3Com Network Supervisor for basic, turn-key network management for mid-market businesses

AVAILABLE SWITCH FABRICS
96 Gbps Switch Fabric
Chassis model compatibility: Switch 7758, 7757 and 7754 and Switch 7708R and Switch 7700 7-slot and 4-slot legacy models
Connections: 4 SFP Gigabit ports (SFPs sold separately)

CONNECTIVITY
Mix and match in available payload slots:
48-port 10BASE-T/100BASE-T (3C16863A): 48 years (418,000 hours)
48-port 10BASE-T/100BASE-T PoE (3C16890): 48 years (418,000 hours)
48-port 10/100BASE-T & 12-port 1000BASE-X (SFP) (3C168915): 48 years (421,000 hours)
1000BASE-X SFP (3C168916): 72 years (653,000 hours)
10/100BASE-T & 12-port 1000BASE-X (SFP) (3C168917): 66 years (594,000 hours)
10/100/1000BASE-T PoE (3C16890): 48 years (395,000 hours)
10/100/1000BASE-T (3C16888): 39 years (342,000 hours)
10/100BASE-TX (3C16889): 48 years (395,000 hours)
1000BASE-X SFP (3C16891): 44 years (389,000 hours)
1000BASE-X (SFP) (3C16891): 74 years (633,000 hours)

DIMENSIONS
Switch 7758 8-slot:
Height: 51.9 cm (20.4 in); width: 43.6 cm (17.2 in); depth: 48.0 cm (18.9 in)
Weight (fully loaded chassis): 80 kg (176 lbs)
Switch 7757 7-slot:
Height: 48.6 cm (19.1 in); width: 43.6 cm (17.2 in); depth: 48.0 cm (18.9 in)
Weight (fully loaded chassis): 70 kg (154 lbs)
Switch 7756 4-slot:
Height: 35.2 cm (13.8 in); width: 43.6 cm (17.2 in); depth: 48.0 cm (18.9 in)
Weight (fully loaded chassis): 50 kg (110 lbs)

SWITCH POWER SUPPLY
550 W AC Power Supply: dual power input connections
Input voltage: 100-240 VAC autoranging
Operating frequency: 47-63 Hz
Maximum current: 15A at 110 VAC; 7A at 200 VAC
Maximum output power: 460 W

ENVIROMENTAL
Operating temperature: 0° to 40°C (32° to 104°F)
Operating humidity: 5% to 85% non-condensing
Storage temperature: -40° to 70°C (-40° to 158°F)
Storage humidity: 10% to 90% non-condensing
Standard: EN 60068 (IEC 68) compliant

MTBF
Switch 7750 96 Gbps Switch Fabric (3C16886): 46 years (405,000 hours)
Switch 7750/7700 20-port 100BASE-X SFP (3C16862A): 68 years (594,000 hours)
Switch 7750/7700 20-port 10/100BASE-T & 1000BASE-T (3C16863A): 59 years (519,000 hours)
Switch 7750/7700 1-port 10GBASE-X XENPAK (3C16875A): 61 years (539,000 hours)
Switch 7750/7700 48-port 10/100BASE-T & 1000BASE-X (3C16888): 48 years (418,000 hours)
Switch 7750/7700 48-port 10/100BASE-T & 12-port 1000BASE-X (SFP) (3C16891): 74 years (633,000 hours)
Switch 7750/7700 48-port 10/100BASE-T & 12-port 1000BASE-X (SFP) (3C168915): 74 years (633,000 hours)
Switch 7750/7700 4-port 1000BASE-X SFP (3C168916): 72 years (653,000 hours)
Switch 7750/7700 4-port 10/100BASE-T & 12-port 1000BASE-X SFP (3C168917): 66 years (594,000 hours)
Switch 7750 External PoE Power Rack (3C16883): 18 years (158,000 hours)
Switch 7750/8800 PoE Power Supply Unit (3C16884): 43 years (375,000 hours)
